MakoNet Managed File Sharing

Today's businesses must have the ability to work on the go. Employees working across department, from home or out on the road, need not swap multiple versions of files to complete a presentation or process flow, or even use email to work together on projects in real-time. Making MakoNet Managed File Sharing available to your organisation will reduce the time to communicate an idea and retrieve company documents.

- ✔ **Simple and Secure Sharing** – MakoNet Managed File Sharing allows end-users to quickly and easily work securely from anywhere with an Internet connection. Share files, view and comment on any kind of document and connect with co-workers independent of what devices are being used.
- ✔ **Control your cost** - Sharing your data into the cloud means you get all the advantages of on-site infrastructure whilst reducing the overhead and issues of running onsite hardware.
- ✔ **Previous Versions** – MakoNet Managed File Sharing offers versioning and archiving control. Easily access files by version history and directly upload new versions of files.
- ✔ **Monitoring** – MakoNet Managed File Sharing enables you to take control of who is accessing a document or folder, who can share and who can preview each file. You can set up initial rules and modify them as business requirements change.
- ✔ **Usage and Permissions** – Use the permissions, monitoring and reporting flexibility of your private cloud to observe employee behaviour and improve productivity. You can grant certain administrative permissions to assigned delegates and allow them to monitor employee activities through notifications and reporting.
- ✔ **Rapid Deployment** – MakoNet can totally configure your storage solution within a business day or when it suits you.
- ✔ **Generous Quotas** – Simple quota blocks to store as much data as you need and keep it there for as long as your business requirements stipulate. Instant scalability ensures that there is always space for more data.
- ✔ **Simple Billing** – Simply choose the number of users, storage space and pay per year. All management, issue and request resolution are included to avoid any unexpected expenses.

*Ask us how you can share files from anywhere on any device
with MakoNet Managed File Sharing.*
