## Why Use MakoNet Managed Hosted Backups?

**VEEAM**

**STORAGECRAFT**

**storgrid**

- ✓ **Managed Backups** – We managed your backups so you don't have to. Our backups run as required, so no more failed backups from staff not changing tapes or hard drives.
- ✓ **Proven Industry Software** – Our cloud data backup solutions are powered by industry proven partners and enable us to offer several data backup solutions, perfect for all business sizes.
- ✓ **Rapid Deployment** – We can totally configure your backup solution within a business day or when it suits you.
- ✓ **Quick Recovery** - Our Managed Hosted Backup solution file recovery times are considerably faster than many competitors. Most data can be restored within minutes and a full server recovery within hours.
- ✓ **Security** – We store your encrypted offsite backups in a modern and secure Perth data center with industry leading infrastructure with additional data center replication to fully ensure that your data is safe.
- ✓ **Monitoring** – We actively monitor the entire backup process and in the event that something goes wrong, (internet connection failure for example) we will know! We even test restore every month to prove data integrity.
- ✓ **Disaster Recovery** – We also offer Disaster Recovery options, so if your device fails, we can load your data onto replacement hardware ASAP so that your staff can get back to work as quickly as physically possible.
- ✓ **Hybrid Remote Backups** – Your data is backed up onsite and replicated offsite. If a large amount of data is accidentally deleted or corrupted, recovery is as quick and simple as a local recovery transfer.
- ✓ **Generous Quotas** – Simple quota blocks to backup as much as you need and keep it there for as long as your business requirements stipulate. Instant scalability ensures that there is always space for more data.
- ✓ **Add Features** – We work with you and customize your solution so you only pay for features you need rather than a one size fits all approach.
- ✓ **Simple Billing** – No lock in contracts. Simply pay per month and we will let you know if you are nearing the next quota block so we can purge old backups or extend your retention time. Our backup solution, management, issue resolution, user and test restores are included to avoid any unexpected expenses.

*The worst time to find out that you cannot recover your data is when you have to recover data. Contact us and see how we can integrate a backup solution suited to your business requirements.*
